Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n , representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m , representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

2 4 5 6

5

Output: 5 is present!

Answer

// You are using Java

import java.util.*;

```
public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        TreeSet<Integer> seats = new TreeSet<>();

        for (int i = 0; i < n; i++) {
            seats.add(sc.nextInt());
        }

        int m = sc.nextInt();

        if (seats.contains(m)) {
            System.out.print(m + " is present!");
        } else {
            System.out.print(m + " is not present!");
        }
    }
}
```

Section 1 : COD

1. Problem Statement

Priya is analyzing encrypted messages in a research project. She wants to analyze the frequency of each character in a given paragraph. The characters should be stored in a TreeMap so that the output is sorted in ascending order of characters automatically.

You are required to build a Java program that:

Uses a `TreeMap<Character, Integer>` to count how many times each character appears in the message. Ignores spaces and considers only alphabets (case-sensitive). Outputs the frequencies of characters in sorted order.

You must use a TreeMap in the class named MessageAnalyzer.

Input Format

The first line of input contains an integer n, the number of lines in the message.

The next n lines each contain a string (the encrypted message line).

Output Format

The first line of output prints: "Character Frequency:"

Then print each character and its frequency in the format: "<character>: <count>"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2
Hello World
Java

Output: Character Frequency:

H: 1

J: 1

W: 1

a: 2

d: 1

e: 1

l: 3

o: 2

r: 1

v: 1

Answer

```
// You are using Java
import java.util.*;
```

```
class MessageAnalyzer {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int n = Integer.parseInt(sc.nextLine());

        TreeMap<Character, Integer> freqMap = new TreeMap<>();

        for (int i = 0; i < n; i++) {
```

```
String line = sc.nextLine();
for (char ch : line.toCharArray()) {
    if (ch != ' ' && Character.isLetter(ch)) {
        freqMap.put(ch, freqMap.getDefault(ch, 0) + 1);
    }
}

System.out.println("Character Frequency:");
for (Map.Entry<Character, Integer> entry : freqMap.entrySet()) {
    System.out.println(entry.getKey() + ": " + entry.getValue());
}
}
```

1. Problem Statement

John is organizing a fruit festival, and the quantities of various fruits are stored in a HashMap where fruit names are keys and quantities are values.

Help him develop a program to find the total quantity of fruits for the festival by summing up the values in the HashMap.

Input Format

The input consists of fruit quantities in the format 'fruitName:quantity', where fruitName is the name of the fruit(a string), and quantity is a double value representing the quantity.

The input is terminated by entering "done".

Output Format

The output prints a double value, representing the sum of values in the HashMap, rounded off to two decimal places.

If the value is not numeric, print "Invalid input".

If any special characters other than ':' are entered, print "Invalid format".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: Banana:15.2

Orange:56.3

Mango:47.3

done

Output: 118.80

Answer

```
import java.util.*;
class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        HashMap<String, Double> fruitQuantities = new HashMap<>();
        double total = 0.0;

        while (true) {
            String line = sc.nextLine();
            if (line.equals("done")) break;

            if (!line.contains(":") || line.indexOf(":") != line.lastIndexOf(":") ||
line.contains("-") || line.contains(" ")) {
                System.out.print("Invalid format");
                return;
            }

            String[] parts = line.split(":");
            if (parts.length != 2) {
                System.out.print("Invalid format");
                return;
            }
        }
    }
}
```

```
String fruit = parts[0];
String quantityStr = parts[1];

double quantity;
try {
    quantity = Double.parseDouble(quantityStr);
} catch (NumberFormatException e) {
    System.out.print("Invalid input");
    return;
}

fruitQuantities.put(fruit, quantity);
}

for (double qty : fruitQuantities.values()) {
    total += qty;
}
}
}
```

Section 1 : COD

1. Problem Statement

A city traffic management system needs to track vehicles entering a toll booth. Each vehicle is uniquely identified by its registration number. The system should allow adding vehicles to a record, ensuring that no duplicate registration numbers exist. The vehicles should be stored in a HashSet, which does not guarantee any specific order.

Your task is to implement a program using a HashSet that allows adding vehicle details and displaying the records.

Input Format

The first line of input contains an integer N - the number of vehicles.

The next N lines contain details of each vehicle in the format: "RegNumber

OwnerName VehicleType"

1. RegNumber (String) - A unique registration number (Alphanumeric).
2. OwnerName (String) - The name of the vehicle owner.
3. VehicleType (String, Car, Bike, or Truck) - The type of vehicle.

If a vehicle with the same registration number is already present, ignore the duplicate entry.

Output Format

The output prints the unique vehicle records in any order (since HashSet does not maintain order).

Output format: "RegNumber OwnerName VehicleType"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

KA01AB1234 John Car
MH02CD5678 Alice Bike
DL03EF9012 Bob Truck
TN04GH3456 Mike Car
KA01AB1234 John Car

Output: TN04GH3456 Mike Car
KA01AB1234 John Car
MH02CD5678 Alice Bike
DL03EF9012 Bob Truck

Answer

```
// You are using Java
import java.util.*;
```

```
class Vehicle {
    String regNumber;
    String ownerName;
    String vehicleType;

    public Vehicle(String regNumber, String ownerName, String vehicleType) {
```

```

        this.regNumber = regNumber;
        this.ownerName = ownerName;
        this.vehicleType = vehicleType;
    }

    // Override equals to compare only regNumber for uniqueness
    @Override
    public boolean equals(Object o) {
        if (this == o) return true;
        if (!(o instanceof Vehicle)) return false;
        Vehicle v = (Vehicle) o;
        return regNumber.equals(v.regNumber);
    }

    // Override hashCode consistent with equals
    @Override
    public int hashCode() {
        return regNumber.hashCode();
    }

    @Override
    public String toString() {
        return regNumber + " " + ownerName + " " + vehicleType;
    }
}

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int N = sc.nextInt();
        sc.nextLine(); // Consume the newline
        HashSet<Vehicle> vehicles = new HashSet<>();

        for (int i = 0; i < N; i++) {
            String line = sc.nextLine();
            String[] parts = line.split(" ");
            Vehicle vehicle = new Vehicle(parts[0], parts[1], parts[2]);
            vehicles.add(vehicle); // add() will ignore duplicates based on regNumber
        }

        for (Vehicle v : vehicles) {
            System.out.println(v);
        }
    }
}

```

240701119
}
}
}

Section 1 : MCQ

1. What will happen if you add a null element to a TreeSet?

Answer

An exception occurs

Status : Correct

Marks : 1/1

2. What will be the output of the following code?

```
import java.util.*;  
class Main {  
    public static void main(String[] args) {  
        HashMap<String, String> map = new HashMap<>();  
        map.put("A", "Apple");  
        map.put("B", "Banana");  
    }  
}
```

```
map.put("C", "Cherry");
map.replace("B", "Blueberry");
System.out.println(map);
}
}
```

Answer

{A=Apple, B=Blueberry, C=Cherry}

Status : Correct

Marks : 1/1

3. What will be the output of the following code?

```
import java.util.*;
class Main {
    public static void main(String[] args) {
        HashMap<String, Integer> map = new HashMap<>();
        map.put("A", 1);
        map.put("B", 2);
        map.put("C", 3);
        System.out.println(map.containsKey("B"));
    }
}
```

Answer

false

Status : Wrong

Marks : 0/1

4. Which method removes all elements from a Set?

Answer

clear()

Status : Correct

Marks : 1/1

5. Which of the following is true about TreeMap?

Answer

It maintains natural ordering

Status : Correct

Marks : 1/1

6. Which of the following allows null keys in Java?

Answer

None of the mentioned options

Status : Wrong

Marks : 0/1

7. How does HashSet check for duplicate elements?

Answer

Using equals() and hashCode()

Status : Correct

Marks : 1/1

8. What happens when you add duplicate elements to a HashSet?

Answer

The duplicate is ignored

Status : Correct

Marks : 1/1

9. Which method retrieves the lowest key in a TreeMap?

Answer

firstKey()

Status : Correct

Marks : 1/1

10. What happens if two keys have the same hash code in a HashMap?

Answer

The existing value gets replaced

Status : Wrong

Marks : 0/1

11. Which of the following is true about HashMap?

Answer

It is not synchronized

Status : Correct

Marks : 1/1

12. What is the time complexity of retrieving an element from a HashSet?

Answer

O(1)

Status : Correct

Marks : 1/1

13. What will happen if you add elements in descending order in a TreeSet?

Answer

They are stored in reverse order

Status : Wrong

Marks : 0/1

14. What will be the output of the following code?

```
import java.util.*;
class Main {
    public static void main(String[] args) {
        HashMap<String, Integer> map = new HashMap<>();
        map.put("X", 10);
        map.put("Y", 20);
        map.put("Z", 30);
        map.remove("Y");
        System.out.println(map);
    }
}
```

}

Answer

{X=10, Y=20, Z=30}

Status : Wrong

Marks : 0/1

15. Which statement is true about HashSet and TreeSet?

Answer

TreeSet provides sorted elements

Status : Correct

Marks : 1/1
